Thank you for purchasing the ABY32 signal routing switch. The ABY 32 is a signal switching device that routes either one signal to the A, B or both jacks, or selects one of two signals from either A or B jack and sends it to the Common jacks. LEDs have been provided to indicate which jack(s); A,B or both, are connected to the Common jacks.

The ABY32 is the ideal solution for any instrumentalist needing to switch between two amplifiers, or have the instrument present at both amps. The unit also provides for two instruments to be selected for a single amplifier.
