

# JANUARY 2010

## A preview of new products

New products and updates to existing products we are working on:

We are now working on a product that is so new we do not even have a part number for it yet. It is a powered monitor speaker in a single rack space chassis. We are in the concept stage of design and have not finalized if it should be mono or stereo. It will have a headphone monitor output on the front and a selector switch to monitor inputs. Yes it will have actual speakers built in to the front panel of the unit. We would like some input if you are familiar with rack space speaker monitoring.

## NOW SHIPPING!!

## AS OF JANUARY 13 WE ARE SHIPPING THE NEW MX410!!!

Yes, they are finally shipping!!! We have the first production completed and have shipped almost half of the run already. We started the second production run last week. They are in stock and shipping now!!!

New color for the VP530!

We are now shipping the VP530 in black. All orders will now be shipped with the new color. Please let everyone know of this change.

## New chassis design for the MP128

The MP128 has a redesigned chassis. We made the bottom row a little larger to accommodate actual silk screened numbers rather than the old version that had a sticker for the bottom row. All other stats for the MP128 remained unchanged it functions exactly like the old version. The price is unchanged.

In 2009 we shipped a total of 6442 orders and sold 60727 pieces of Rolls equipment.
